

KENNY NGUYEN

hoangnhan20192@gmail.com | +1 (647) 674 4333 | Vaughan, Ontario

About Me

I am a third year Information Science student at the University of Toronto. 1 year experience as software engineer focused on AI tools and scalable systems. Strong Python background. Experienced with user focused design and end to end product delivery.

Skills

- **Python Backend Development:** Specialized in developing scalable microservices and backend solutions.
- **Modern Web Development:** Proficient in developing dynamic and responsive web applications using React.js, Node.js, and Next.js, ensuring seamless performance and high user engagement.
- **Machine Learning & AI:** Familiar in building predictive models, data preprocessing, and deployment using Scikit-learn, TensorFlow, and Jupyter Notebook, delivering actionable insights.
- **API Development & Integration:** Adept at creating and integrating RESTful and GraphQL APIs, ensuring secure and scalable backend functionality.
- **Version Control & Collaboration:** 2 years experience with Git and GitHub, maintaining version integrity and fostering team synergy in agile development environments.
- **CI/CD pipeline:** Familiar with Agile and DevOps practices, streamlining development lifecycles to deliver high-quality software on time. Experienced in CI/CD tools such as Github Actions, Confluence, Trello.

Experience

Back End Software Engineer

HealthBridge AI

Remote

01/2025 to 07/2025

- Built FastAPI services with structured authentication using KeyCloak, improving access control reliability for clinical users.
- Integrated LLM features with LangChain and OpenAI APIs, reducing response time for healthcare automation tasks and improving internal usage rates.
- Deployed containerized services with Docker and Uvicorn workers and improved throughput in high concurrency sessions.
- Automated CI CD pipelines with GitHub Actions and shortened deployment time for backend updates.
- Added OAuth2 and RBAC flows and strengthened compliance with privacy requirements such as HIPAA and GDPR.

Software Developer Intern

Netpalm

Remote

10/2024 to 02/2025

- Built React and Umi.js features that improved user flow and reduced UI related bug reports via Selenium automation test script.
- Created Python Scrapy crawlers that captured structured data for internal analysis and improved dataset completeness.
- Contributed to Docker based microservice development and improved deployment consistency across environments.

Programming Instructor

Algorithmics Inc.
HCMC, Vietnam
06/2024 to 09/2024

- Designed and delivered engaging lesson plans aligned with curriculum objectives, incorporating interactive coding exercises to enhance student comprehension and retention.
- Assessed the performance of 20+ students through tailored tests and quizzes, providing actionable feedback that improved overall class performance by 20%. Provided individualized instruction to meet the needs of all students.
- Delivered personalized instruction to accommodate diverse learning styles, resulting in 90% student satisfaction based on post-course feedback surveys.

Education

University of Toronto | Ontario, Canada
Bachelor of Information, Faculty of Information
09/2025 to 07/2027 (expected)
GPA: 3.50/4.0

Athabasca University | Alberta, Canada
Computer Science Coursework
06/2025 to 09/2025
Grade: A+

Broward College | Florida, USA
Associate of Applied Science Degree in Software Development
09/2022 to 07/2024
GPA: 3.94/4.0

Projects

Liver Tumor Analysis

Duration: 07/2023 to 08/ 2023

Link: <https://github.com/Pintopie/Liver-Tumor-ML>

- Designed and implemented an end-to-end machine-learning pipeline to detect liver tumours from MRI scans using a public Kaggle dataset; developed reproducible Jupyter notebooks and preprocessing scripts to standardize inputs across sequences.

Local AI Model with RAG Pipeline

Duration: 08/2024 to 03/2025

Link: <https://github.com/Pintopie/local-rag-system>

- Engineered a local Retrieval-Augmented Generation (RAG) pipeline with a React-based UI to enable private, low-latency conversational search over local documents and knowledge bases.
- Built a lightweight vector-retrieval stack (document chunking, embedding generation, and nearest-neighbor search) and integrated an on-device inference engine (Ollama) to serve responses without external API calls- preserving data privacy and reducing latency.

JarvisMD AI Clinical Assistant

HealthBridge AI

Duration: 11/2024 to 04/2025

Link: <https://mvp.healthbridgeai.com/>

- Contributed to enterprise-grade AI assistant platform (JarvisMD) used to ingest clinician audio, run automated transcription pipelines, and deliver LLM-powered clinical summaries and structured notes and suggestions.
- Implemented a scalable, containerized microservice architecture using Docker and docker-compose; designed production runtime with Gunicorn + Uvicorn workers and Nginx reverse-proxy for high availability and traffic routing (compose-managed multi-replica backend).
- Integrated enterprise SSO (Keycloak) and JWT-based auth flows, enforced role-based access, and implemented secure secret management via environment files to meet internal compliance and data-privacy constraints.
