EDUCATION

University of Toronto

Toronto, ON, CA

Bachelor of Information

September 2025 - May 2027

Major in Information Science

Cumulative GPA: 3.86/4.0; Dean's List Fall Term 2025

Relevant Coursework: Javascript Computational Reasoning, Figma Design Studio; Arduino Computer System

Broward College

Florida, US

Associate of Applied Science

September 2022 - May 2024

Major in Software Development

Cumulative GPA: 3.94/4.0; Dean's List Fall & Winter Term 2023

Related Coursework: Data Structure & Algorithms, Intermediate Java development, Python Machine Learning

WORK EXPERIENCE

S. Sutton & Associates Inc.

Toronto, ON, CA

Junior Web Developer & IT System Administrator - Contract Part-time

Jan 2026 - May 2026

- Led responsive website redesigns and content updates to improve mobile usability, site structure, and user experience across core web pages.
- Managed hosting operations including **GoDaddy**, DNS configuration, SSL certificates, and domain administration, helping maintain 99.99% uptime across production web properties.
- Performed **SEO** audits and maintained **Google Analytics** tracking to monitor traffic patterns, content performance, and conversion behavior, contributing to 102% growth in organic traffic / additional monthly visits.
- Translated business requirements into technical recommendations for website and infrastructure improvements aligned with security best practices and long-term maintainability.
- Implemented monitoring and maintenance workflows to reduce website issues and support stable production performance, cutting 10 hours a week of manual troubleshooting.

HealthBridgeAI

Remote

Backend Software Engineer - Contract Full-time

Jan 2025 - July 2025

- Built FastAPI services with structured authentication and authorization using Keycloak, improving access control reliability for clinical users and supporting 10000+ active users / sessions.
- Integrated LLM-powered workflows with LangChain and OpenAI APIs to automate diagnosis, reducing processing time by 68% for Doctors.
- Deployed containerized backend services with Docker and Uvicorn workers to support high-concurrency traffic, improving throughput and stabilizing service performance under load.
- Automated CI/CD pipelines with GitHub Actions, reducing deployment friction and shortening release cycles from 2 hours+ to under 15 minutes including build time across staging and production.
- Collaborated with engineering and product stakeholders to refine backend requirements and ship iterative improvements for clinical workflows.

Netpalm.AI

Remote

Software Developer Intern

Oct 2024 - Feb 2025

- Built **React** and **Umi.js** features that improved user flow and reduced UI bugs, contributing to a 50% decrease in frontend issue reports.
- Developed **Python Scrapy crawlers** to collect structured data for internal analysis, improving dataset coverage and reducing manual collection effort.
- Contributed to Docker-based **microservice development** and **deployment** workflows, improving environment consistency and reducing setup issues across 3 environments.

- Supported testing and validation with **Selenium automation**, increasing regression coverage and catching UI issues earlier in the development cycle.

PROJECTS

AI Clinical Assistant “JarvisMD” - <https://mvp.healthbridgeai.com>

Nov 2024 – Apr 2025

Company: HealthBridge AI

- Contributed to an enterprise AI clinical assistant platform that ingested clinician audio, automated transcription, and generated structured clinical summaries and follow-up recommendations.
- Built and maintained containerized backend services using **Docker**, **Gunicorn/Uvicorn**, and **Nginx**, supporting reliable production deployment, traffic routing, and high availability.
- Implemented secure authentication and authorization flows with **Keycloak** and JWT-based role controls, with environment-based secret handling to support healthcare privacy and compliance requirements.
- Supported infrastructure that scaled to 10,000 concurrent users in the initial MVP and sustained a 40,000-session concurrency room while maintaining **99.9%** uptime through an internal health-checking system using Python with Zulip bot API that triggered alerts when the system went down.

LocalYoutubeRAG - <https://github.com/Pintopie/LocalYoutubeRAG>

Aug 2024 - Mar 2025

- A local-first retrieval-augmented generation system that ingests YouTube tutorial transcripts and answers questions with timestamped, source-grounded citations across **60+ minute** technical videos.
- Designed and shipped a **FastAPI** backend and **React/Vite** frontend for transcript ingestion, chunking, retrieval, and conversational search, supporting a full local workflow from URL input to interactive Q&A.
- Integrated **Ollama** for on-device inference, eliminating external API calls at query time and reducing estimated response latency by **~40-60%** while keeping user data fully local.
- Implemented chronological transcript chunking with **overlap-aware retrieval** to preserve context across long-form tutorials, improving answer continuity for multi-topic videos and reducing context drift.

Liver Tumor Analysis - <https://github.com/Pintopie/Liver-Tumor-ML>

Jul 2023 - Aug 2023

- Built an end-to-end machine learning pipeline for liver tumor analysis using **NiftI medical imaging** data, supporting preprocessing, visualization, and model training on volumetric scan inputs.
- Implemented feature extraction from segmentation masks and standardized MRI slices to prepare medical images for downstream analysis and reproducible experimentation.
- Trained a **Random Forest model** for tumor detection/analysis and packaged the workflow in Docker to ensure consistent local execution across environments.
- Developed visualization utilities for slice-level inspection of **3D medical scans**, enabling faster debugging of preprocessing steps and more reliable model iteration.

SKILLS

- **Backend Development:** Experienced with developing scalable microservices and backend solutions using Python FastAPI and Gunicorn + Uvicorn workers.
- **UI/UX & Prototyping:** Proficient in designing wireframes and interactive prototypes using Figma, translating user requirements into intuitive interface designs and developer ready specifications.
- **Database:** Familiar with SQL and NoSQL database tools like PostgreSQL and MongoDB.
- **Web Development:** Proficient in developing dynamic and responsive web applications using React.js, Node.js, and Next.js, ensuring seamless performance and high user engagement.
- **Machine Learning:** Familiar in building predictive models, data preprocessing, and deployment using Scikit-learn, TensorFlow, delivering actionable insights.
- **API Development & Integration:** Adept at creating and integrating RESTful and GraphQL APIs, ensuring secure and scalable backend functionality.
- **Version Control & Collaboration:** Experienced with Git and GitHub, maintaining version integrity and fostering team synergy in agile development environments.
- **DevOps:** Comfortable with Agile and basic DevOps practices, streamlining development lifecycles to deliver high-quality software on time. Experienced in tools such as Github Actions, Confluence, Trello.
